Subject: RE: Additional EPA data packages from Willowbrook

Hi Renee:

Forwarded the invite in a separate email. I saw a "tentative" acceptance from Dyron a few days ago.

On the collocated concentrations, I did want to mention that the GHD/SGS Galson concentrations appear to be consistently higher than what we measure and what Sterigenics reports. The comparisons are not out of range for air toxics work in general but in most cases "your" numbers are higher by a factor of 2. I'm reluctant to get into real specifics on the inter-lab calls because of the concurrent litigation but I did want you to know that we are seeing this pattern. It may be harder to compare the numbers going forward with the facility shut down (area wide concentrations are dropping as your data surely has seen) but it is an issue worth pursuing. We will be forwarding a set of questions to all the call participants in a few minutes but the issues are teed up more generally.

Let's talk if you and/or Tim wish to pursue in more detail.

Morning Lew. We have been told that there is a call scheduled among the three labs today? We had not heard that directly. Could you verify? Thank you. Renee

Tim/Renee:

According to my records, we shared the data package for the Feb 8 EtO samples. Do you wish to see more of them? We have posted the Feb 11 data and will be reviewing more recent data this week. I don't want to bury you and GHD with information but we are happy to share additional data packages from ERG.
